

CASE STUDY MAST INSPECTION

Project: Condition Survey of Penrhys Telecommunications Mast

Up and Under Ltd were commissioned to undertake a condition survey of the Penrhys Telecommunications mast near Aberdare, South Wales.

The survey required operatives to utilise rope access methods to get within touching distance of all structural members and intersections to the fabricated steel framework as well as inspecting the access ladders, rest platforms and fall arrest system. Throughout the works operatives wore RF monitors to ensure RF exposure did not exceed ICNIRP guidelines.

On completion of the inspection report Up and Under (Specialist contracts) Ltd. provided our client with a detailed quotation for completion of the recommended remedial works.
